Use instructions for the Split Pin and Adjustable Length Paper Bead Crafts Paper Bead Rollers.

Designed by Julie A. Bolduc

Adjustable Length Paper Bead Rollers:
The 5 Adjustable Length Bead Rollers Sizes are: 5/64", 3/32", 1/8", 5/32" and 3/16".
They're numbered 1 through 5 with the number 1 being the smallest of the 5 sizes. The split pins are adjustable by sliding them in and out of the handle, so you can use whatever length you want whether you are making short or long beads. I have included 2 pin stopper disks, 2 slider beads and 2 cube shaped stabilizer beads with each bead roller. You only need to use one each of these. One of the two flat pin stopper beads go on the pins first. This will help prevent the pins from going back into the handle when you have pulled out the pins to the length you want them to be.

Split Pin Paper Bead Rollers:
The 6 Split Pin Bead Rollers Sizes are: 1/16”, 5/64", 3/32", 1/8", 5/32" and 3/16". They are numbered 0 through 5 with the number 0 being the smallest of the 6 sizes. The winding tip is 1¼” long and may not necessarily need the stabilizer bead but I have included them in your package. You can use one of the slider beads if you need help removing your finished bead after rolling up your strip.

Due to the limited colors of the special flexible filament, I have, all of the stabilizer beads and pin stopper disks are in rainbow colors no matter what color your bead roller is. They are color coded according to the pin size in rainbow order for size order with the natural color for the 1/16” split pin size to blue for the 3/16” size.

Rolling Your Beads

Materials Needed
Any type of Paper
Any size paper bead roller
All Purpose Glue
Glaze of some sort

1. Cut your strips and get them ready.

2. Get your white glue ready by pouring some onto a disposable little tray of some sort. You can use a piece of paper or a plastic lid, or whatever you want.

3. Get a toothpick or small craft brush ready to use for applying the glue to the end of the strip when you are about finished rolling the strip.

4. Hold the handle of your bead roller in either your right or left hand. If using the adjustable length roller, adjust the length of the winding pin to conform to the wide end of your paper strip, leaving room at the end for a stabilizer bead. Insert the wide end of a paper strip into the split pin making sure the side you want on the outside of your bead is facing down or away from you at the opposite end of the end that is in the split pin. Pull the strip of paper so it is just inside the split pin so you can barely see the edge of the paper poking through. I have included a packet of stabilizer beads. Find one with the right sized hole for the roller you are using and insert the tip of your winding pins into the hole. Push the bead up to the edge of the paper. Start winding the pin away from you in a clockwise winding motion or counterclockwise if you are left-handed. (Adjustable Length) If you want to, you can pull out or push in the split pins to adjust the length you need for a more comfortable length for placing your fingers on the split pins.

5. Just as you are getting to the end of the strip, use your toothpick to apply the glue to the end of the strip to secure the end in place. With your thumb and forefinger of the hand that is holding the handle, grasp the split pins tight and pull the stabilizer bead then your new finished bead off the pins.

6. Use a needle tool to clean up the inside of the bead. Stick the pin inside the bead and place the beads inside the palm of your hand and roll up and down to open the center of the hole of the bead to get rid of the little end of paper. You can also reinsert the pins of the paper bead roller back into the bead and twist the roller around or the bead around the clear the center of the bead of the paper end.

Glazing Your Beads

You can glaze your beads any way you see fit. There are several videos on YouTube that will show you how you can glaze them.
I glaze mine by stringing them on 50lb fishing line, dipping them into PC Petrifier and hanging them on a bead drying rack. Twice into PC Petrifier and twice into Janice Mae’s Vibrance, inverting them after each dip and allowing them to dry at least an hour between each dip.

Easy Care! Just wipe the handle with a slightly damp cloth. Do not immerse in any liquid. You will damage the inside of the handle. Clean pin with a paper towel as it gets dirty. With proper care, your Paper Bead Rollers should last for years.
