

How to Use the Paper Bead Crafts Slotted Paper Bead Rollers

Designed by Julie A. Bolduc

These instructions are meant to just get you started with the concept of making paper beads.

You can get more in depth instructions and information on how to make the paper beads by going to our Web Site! <http://www.jpfun.com>

Materials Needed

Any Type of Paper
Some sort of paper cutting device
Any Size paper bead roller.
All Purpose Glue
Glaze of some sort

Six Sizes Available

- #1 - 5/64" - 2mm
- #2 - 3/32" - 2.5mm
- #3 - 1/8" - 3.18mm
- #4 - 5/32" - 4mm
- #5 - 3/16" - 5mm
- #6 - 1/4" - 6.5mm

A Needle Tool is also available.

Rolling Your Beads

1. Cut your strips and get them ready.
2. Get your white glue ready by pouring some onto a disposable palate. You can use a piece of paper or a plastic lid, or whatever you want.
3. Get a toothpick or small craft brush ready to use for applying the glue to the end of the strip when you are about finished rolling the strip.
4. Hold the handle of your bead roller in either your right or left hand. Insert end of paper strip in slotted pin making sure the side you want

on the outside of your bead is facing down or away from you at the opposite end of the end that is in the slotted pin. Start winding the pin away from you in a clock wise winding motion or counter clockwise if you are left handed.

5. Just as you are getting to the end of the strip, use your toothpick to apply the glue to the end of the strip to secure the end in place. Pull the bead off the pin.

Glazing Your Beads

You Can Glaze Your beads however you like but I actually glaze them by stringing them onto 50lb fishing line and dipping them into PC-Petrifier, a wood hardener, 2 times, 2 coats in Vibrance or Fast Finish Decoupage. I hang the strands of beads on a Paper Bead Drying rack I made. You can get the free instructions and the pattern for making the paper bead drying rack on the web site.

Some people brush on their glaze and use toothpicks to hold their beads. They stick the toothpicks into foam packaging or something else to allow the beads to dry. I used to do it this way until I discovered it is faster and more efficient to dip them strung on 50lb fishing line.

I have also used a 2 part epoxy resin called Luxe Epoxy Resin System for Jewelry. These beads came out so much harder and more resistant to water than with any other glaze, that I use them in making wire wrapped rings so that way, you can wash your hands without fear of damaging the bead in the ring!

Easy Care! Just wipe the handle with a slightly damp cloth. Do not immerse in any liquid. Clean pin with a paper towel as it gets dirty. With proper care, your Paper Bead Roller should last for years!
