

Paper Bead Crafts

Pre Made Bead Sheets

Designed by Julie A. Bolduc

These bead sheets were designed with paper bead making in mind but they can be used for scrapbook and other paper projects as well.

Some were hand drawn on small pieces of paper, scanned and manipulated with my painting program to make full size sheets. Some were completely computer generated using my painting program and others were made using photos I took, manipulated in a kaleidoscope program and manipulated with my painting program. I have also used Microsoft Publisher's background feature to make some of the sheets.

I used various techniques to make these bead sheets.

Some bead sheets are printed all over while others are printed either on

one edge or both edges. The sheets that are printed down one edge are meant to be rolled into tube beads. The sheets that have the images down the left and right side of the sheet are meant to be cut into triangles at any wide width down to any narrow width to make bicone or barrel type beads.

The resolution for most of them have been set to Normal so they are not at 300pixels per inch. They are more like 200ppi. I like to set them at a lower resolution so they do not take as much ink to print as a photograph.

Also when you glaze your beads, depending on what glaze you use, the color will be enhanced anyway.

All of the Full Page bead sheets take time to make and every single sheet that

has this page attached to it has a picture of actual beads made with these bead sheets on the site. The photo of the beads is there to show you what various types of beads look like when you roll them. If you notice, the beads are different shapes and sizes.

As I said earlier, they do take time to make so please do not share these bead sheets with anyone. Please instead, give the link to the download page so they can either purchase it, if it is for Paid members only or download it if it is a free bead sheet.

You have my permission to sell any beads, jewelry or projects you make with these bead sheets. Please do not sell the bead sheet files themselves. Thank you!
